## Junior/Middle Embedded Developer (m/f) – Jurdani (Rijeka)

### The position

As a developer, you will make an impact on the development of our client's products and solutions, working closely with other parts of the organization. You will experience a variety of tasks and responsibilities and be integral in the development-chain from idea to industrialization of their products. Additionally, you will get the opportunity to work with everything from low-level to complete applications for configuration and surveillance of the systems.

### Other task and areas of responsibility:

- development of the new products, from research to deployment
- software development for embedded systems
- problem-solving and fronting new solutions
- technological studies
- maintenance of existing products
- third-line support (internal and external).

### The candidate

- technical university degree (Bachelor or Master)
- experience with C, C++ and, ideally, with the complete stack in embedded Linux
- excellent fluency in English
- a great interest in embedded systems, applications and cloud solutions
- a passion for audio and security, modern software development, machine learning and AI
- professional, open and passionate
- systematic and solution-oriented personality
- a proactive attitude with a desire for a continuous improvement
- customer-oriented and cooperative approach.

### What is in it for you?

- working in a positive, dynamic and flexible environment
- products with significant social value
- freedom in relation to technology
- agile environment
- a significant investment in R&D
- ability to be creative, innovative and heard
- attractive remuneration package.
