

University of Rijeka
FACULTY OF ENGINEERING

Postgraduate university doctoral study in the area of Engineering sciences, in the field of Electrical engineering

Study programme

Rijeka, April 2020

Basic information	
<i>Title of study programme</i>	Postgraduate university doctoral study in the area of Engineering sciences, in the field of Electrical engineering
<i>Study programme coordinator</i>	University of Rijeka – Faculty of Engineering
<i>Study programme implementor</i>	University of Rijeka – Faculty of Engineering
<i>Type of study programme</i>	Postgraduate university doctoral study
<i>Level of study programme</i>	Level 8.2
<i>Academic/professional degree awarded upon completion of study</i>	Doctor of Science
<i>Title and code of the qualification standard acquired upon the finishing of the study (if the programme is enrolled in the CROQF Register)</i>	-

1. INTRODUCTION

1.1. Study goals and learning outcomes

The proposed postgraduate study programme in the area of Engineering sciences, in the field of Electrical engineering aims to provide Masters of electrical engineering graduated at the Faculty of Engineering, and other related institutions in Croatia and abroad, the opportunity to continue the education and further scientific training.

Croatian society's contemporary aims are transformation into a knowledge society and European and global integration. Croatia needs to develop into a modern society and the economy of experts, into a country of a wise international political partner to great systems and old democracies. The weakening of the productive sector in the economy and the decline in the number of students enrolled into programmes in technical and natural sciences must be stopped in the same way that was done in the countries which have successfully completed the aforementioned transformation. The study programme will educate researchers who will be able to contribute to the accomplishment of the aforementioned aims. Some researchers who remain in the higher education and scientific research system will educate new generations of engineers and scientists, but they will also generate new research results, enable the transfer of knowledge and, through their research and contacts with foreign researchers, help Croatia with European and global integration and growth. There is even a greater need of our economy for creative and enterprising young researchers who will help the economy grow. The key element in the future of Croatia are awakened creators, expert engineers and capable entrepreneurs whose technological creations can be sold all over the world.

The education of graduate electrical engineers and Masters of electrical engineering since 1999 until today at the Faculty of Engineering of the University of Rijeka has been satisfying the need for highly educated professionals in the field of Electrical engineering in Primorsko-goranska county and in the neighbouring counties. However, in the same period there has been a growing need for doctors of science in the same area. The initiation of this study will provide larger economic entities (HEP, INA, shipyards, Port of Rijeka) additional training of existing employees, but also employment opportunities for new PhDs. It is also expected that graduated students from the suggested study will further foster innovation and development of new technologies in a number of small and medium enterprises operating in the fields of industrial and naval electronics, embedded systems, information and communication technologies. Faculty of Engineering and other components of the University of Rijeka have been lacking new researchers at doctoral level in the field of electrical engineering for many years, and it is expected that a part of the students of the proposed study programme will continue to work at the University of Rijeka.

Existing scientific and professional projects and sustained cooperation with industry and entrepreneurship are

the bases and the assumption for the continuity and further development of collaborative research that will be additionally fostered by the proposed study programme. Professionals from the industry are involved in the design and drafting of the proposed study programme, and their cooperation in implementing the study is also foreseen. Cooperation with larger industries (such as HEP, Uljanik shipyard) is expected in the first place, but collaborations with small and medium enterprises are also expected. In particular, small and medium enterprises that were created using the knowledge and results of the research conducted at the Faculty of Engineering, companies that are based on the application of the latest technical solutions, that are creating new products and are employing former students of the Faculty of Engineering will be involved. Students will also have the possibility to research at the university centres such as the Science and Technology Park and the Centre for Advanced Computing and Modelling. The emphasis on multidisciplinary studies and application of innovative technologies in other areas of society, will allow connection with local communities and associations that seek to improve the quality of life of the wider community. Extensive experience of doctoral studies in the field of Mechanical Engineering, Naval Architecture and Fundamental Engineering Sciences, and the cooperation with the local community in these engineering areas will be a link to improve research activities and to broaden the impact of the proposed doctoral study.

As we are witnessing the rapid development of new technologies, methods and procedures, as well as scientific advances in the STEM field today, the directions of scientific research have crystallized, towards accomplishing new goals and which can make a significant scientific contribution within the already existing structure of study programmes. Furthermore, since the Faculty of Engineering in Rijeka invests significant funds in the procurement of scientific research and teaching equipment, the foundations for scientific research have been expanded. Also, the Faculty is actively supporting a large number of scientific research projects in which research recognized in international scientific circles is carried out, and in this connection the study program follows the modern trends of research recognized in this way. The learning outcomes of individual subjects were determined in a way that their descriptors clearly express the level of study and clearly state the way of learning outcomes of the whole study, which are harmonized with the CROQF methodology and defined as follows:

Scientific research contribution

- Formulate a hypothesis for scientific research
- Apply a scientific method (theoretical, experimental, analytical, numeric, or similar) with the aim of confirming or rejecting the hypothesis
- Create one's own theories, methods, procedures, models, and other scientific results
- Analyse and revise existing sources and databases with the aim of collecting data needed for carrying out own research

Scientific collaboration

- Establish collaboration with other researchers from the country and abroad
- Apply and lead a national/international research project – prepare the project proposal, establish a financial plan, achieve project goals, report regularly on project work
- Independently or as a member of a research group, carry out scientific research and critically evaluate existing theories and research results

Dissemination skills

- Present to the wider public and popularise the results of own scientific research
- Publish a research paper in a major international journal
- Publish and present a research paper at an international scientific event (workshop, congress, conference)

Social responsibility

- Develop innovative solutions through creative activities with the aim of increasing the knowledge of the society
- Use scientific methods to solve complex economic and other problems
- Take ethical and social responsibility in carrying out scientific research successfully, especially taking into consideration the social relevance of research results

The achievement of such learning outcomes will further achieve: improving postgraduate education in Croatia,

increasing the comparability of postgraduate programs with similar programs in the EU, further promoting cooperation with other universities and institutes at home and abroad, increasing the quality of research work, should be at a similar level of education as those in Western Europe and the USA, educating professionals who will further enhance education, science, the economy and other segments of our society.

1.2. Experiences to date

Faculty of Engineering of the University of Rijeka presently implements the Postgraduate Doctoral Study in the area of Engineering Sciences, in the fields of Mechanical Engineering, Naval Architecture and Fundamental Engineering Sciences. Studies in the field of Electrical Engineering have been implemented at the Faculty of Engineering in the form of undergraduate vocational studies since 1987, and in the form of graduate university studies since 1999. Currently, the Faculty of Engineering is implementing the studies in the field of Electrical Engineering at the undergraduate and graduate level and in accordance with the Bologna declaration.

At the Faculty of Engineering, the studies in the field of electrical engineering at the undergraduate and graduate levels were aligned with the Bologna Declaration, and from 2012 they were complemented with the postgraduate level studies. Namely, in order to further strengthen the results of the research and use the positive experiences of the established studies in the fields of mechanical engineering, naval architecture, basic technical sciences and interdisciplinary technical sciences, the Council of the Faculty of Engineering decided to establish a Postgraduate doctoral study covering the field of electrical engineering and thus encourage synergy of knowledge from these complementary fields of technical science. Therefore, in academic year 2012/2013. the postgraduate doctoral study in the scientific field of Electrical Engineering started with its implementation. The proposed study proved to be successful, as confirmed by the results of a self-evaluation and report of the Reaccreditation Committee (in June 2016). However, further improvements have been made to increase the quality of studies and strengthen the learning outcomes of prospective doctorate students.

The improved study program, has been approved for implementation by the decree of the Senate of the University of Rijeka in March 2020. It is aligned with the strategy of science development, which was highlighted as a positive example by the Expert Committee on Re-accreditation process of the Faculty of Engineering in Rijeka (August 2018). It is also aligned with the strategy of the University of Rijeka (Strategy 2014-2020, University of Rijeka, 2014), primarily for the purpose of enhancing the University's visibility in the research context and expanding the pool of scientists and researchers in the field of electrical engineering. Finally, with the goal to strengthen the research of the University of Rijeka, the program increases competitiveness and enables monitoring of current trends. It is also expected to contribute to an increase in the number of scientific papers published in high-ranking journals indexed in the most important scientific bases, which will further contribute to the Faculty's reputation, and the University of Rijeka will be ranked better in the world rankings of universities.

2. IMPLEMENTATION OF THE STUDY PROGRAMME

Due to the valid Regulations on postgraduate university (doctoral) study programmes, which is harmonized with the provisions of the University of Rijeka Study Regulations, the organization of studies, the procedure and criteria for admission, the guidance through the programme, execution of the programme and programme obligations, doctoral thesis and completion of the programme, as well as the student rights and responsibilities are determined.

3. PROGRAMME DESCRIPTION

The study is conducted in the scientific area of Engineering Sciences within the scientific field of Electrical Engineering. Subjects in the area of study cover the aforementioned scientific field and are organized by subject areas - modules. The modules are of advisory nature and have been formed for the purpose of a clearer overview of related subjects. The modules in the study are: Electronic information systems and Electric power systems and new technologies.

Common courses

LIST OF MODULES/COURSES							
Year of study: 1.							
Semester: 1.							
MODULE	COURSE	COURSE INSTRUCTOR	L	E	S	ECTS	STATUS
All modules	Methodology of the scientific-research work		15	0	0	6	C
	Mathematical modeling and numerical methods		15	0	0	6	E
	Optimization methods		15	0	0	6	E
	Statistical methods and stochastic processes		15	0	0	6	E
	Freely selected course		15	0	0	6	E

Module 1: Electronic-information systems

LIST OF MODULES/COURSES							
Year of study: 1							
Semester: 1							
MODULE	COURSE	COURSE INSTRUCTOR	L	E	S	ECTS	STATUS
Electronic-information systems	Mixed signal processing		15	0	0	6	E
	Electromagnetic Modeling		15	0	0	6	E
	Photonic Devices		15	0	0	6	E
	Measurement and Analysis of Electric Power Quality		15	0	0	6	E
	Intelligent manufacturing systems		15	0	0	6	E
	Intelligent robots and manipulators		15	0	0	6	E

LIST OF MODULES/COURSES							
Year of study: 1							
Semester: 2							
MODULE	COURSE	COURSE INSTRUCTOR	L	E	S	ECTS	STATUS
Electronic-information systems	Nonstationary Signal Analysis and Processing		15	0	0	6	E
	Ambient intelligence		15	0	0	6	E
	Advanced Digital Signal Processing Methods		15	0	0	6	E
	Industrial digital control system		15	0	0	6	E
	Service robotics		15	0	0	6	E

Module 2: Electric power systems and new technologies

LIST OF MODULES/COURSES							
Year of study: 1							
Semester: 1							
MODULE	COURSE	COURSE INSTRUCTOR	L	E	S	ECTS	STATUS
Electric power systems and new technologies	Energy efficiency in electrical systems		15	0	0	6	E
	Modelling of Electrical Power Transmission and Distribution Systems		15	0	0	6	E
	Reliability of Technical Systems		15	0	0	6	E
	Control of Synchronous Machines		15	0	0	6	E
	Power system optimization		15	0	0	6	E

LIST OF MODULES/COURSES							
Year of study: 1							
Semester: 2							
MODULE	COURSE	COURSE INSTRUCTOR	L	E	S	ECTS	STATUS
Electric power systems and new technologies	Active Distribution Networks		15	0	0	6	E
	Intelligent Power Systems - Smart Grids		15	0	0	6	E
	Selected Chapters on Energy Components and Systems of Renewable Energy Sources		15	0	0	6	E
	The elements of energy transition		15	0	0	6	E

COURSE DESCRIPTION		
Course instructor		
Name of the course	Active distribution networks	
Study programme	Postgraduate university doctoral study in the area of Engineering sciences, in the field of Electrical engineering	
Status of the course	elective	
Year of study	1	
ECTS credits and manner of instruction	ECTS credits	6
	Number of class hours (L+E+S)	15+0+0
<i>1.1. Course objectives</i>		
The objectives of the course are to train students for understanding active distribution network's specificities, and to apply, analyze and define appropriate methods for calculations and analysis of active distribution networks.		
<i>1.2. Course enrolment requirements</i>		
None.		
<i>1.3. Expected learning outcomes</i>		
Analyze and validate the impact of distributed generation and energy storage facilities on the electric distribution network, Model the elements of an active distribution network, Apply advanced methods for the calculation of active distribution networks, Apply new type of protection for active distribution networks, Critically asses existing schemes and design optimal schemes for connecting distributed generation and energy storage facilities.		
<i>1.4. Course content</i>		
General consideration about the integration of distributed energy sources into the distribution network. Energy circumstances in active distribution networks (voltage profile, short circuit currents, flickers, higher harmonics). Modeling elements for calculations. Network protection from faults - protection of distributed generation, protection of active distribution network. Impact of distributed generation on the power system. Smart metering devices for measurement of electricity consumption. Expected development of smart grids.		
<i>1.5. Manner of instruction</i>	<input checked="" type="checkbox"/> lectures <input type="checkbox"/> seminars and workshops <input type="checkbox"/> exercises <input type="checkbox"/> distance learning <input type="checkbox"/> fieldwork	<input checked="" type="checkbox"/> individual assignments <input type="checkbox"/> multimedia and network <input type="checkbox"/> laboratories <input checked="" type="checkbox"/> mentorship <input type="checkbox"/> other
<i>1.6. Comments</i>		
<i>1.7. Student responsibilities</i>		
Students are required to attend classes, write a seminar and a project and access the oral exam. Seminar and project to be done in consultation with the teacher.		

1.8. Monitoring of student work ¹							
Class attendance	0,5	Class participation		Seminar paper	2	Experimental work	
Written exam		Oral exam	1,5	Essay		Research	
Project	2	Continuous assessment		Report		Practical work	
Portfolio							
1.9. Assessment of learning outcomes in class and at the final exam (procedure and examples)							
Assessment and evaluation of students' work will be done on the basis of the results of their seminar, project and oral exam.							
1.10. Mandatory literature (at the time of submission of study programme proposal)							
1. N. Jenkins; J.B. Ekanayake; G. Strbac; Distributed Generation, IET, 2010.							
1.11. Optional/additional literature (at the time of submission of the study programme proposal)							
1. S. Chowdhury; S.P. Chowdhury; P. Grossley; Microgrids and Active Distribution Networks, IET, 2009.							
1.12. Number of assigned reading copies in relation to the number of students currently attending the course							
Title					Number of copies	Number of students	
N. Jenkins; J.B. Ekanayake; G. Strbac; Distributed Generation, IET, 2010					1	3-5	
1.13. Quality monitoring methods that ensure the acquisition of exit knowledge, skills and competences							
Through the institution's quality assurance system.							

¹ IMPORTANT: Enter the appropriate proportion of ECTS credits for each activity so that the total number of credits equals the ECTS value of the course. Use empty fields for additional activities.

COURSE DESCRIPTION		
Course instructor		
Name of the course	Advanced Digital Signal Processing Methods	
Study programme	Postgraduate university doctoral study in the area of Engineering sciences, in the field of Electrical engineering	
Status of the course	elective	
Year of study	1	
ECTS credits and manner of instruction	ECTS credits	6
	Number of class hours (L+E+S)	15+0+0
<i>1.1. Course objectives</i>		
Obtaining the theoretical and practical knowledge about the advanced digital signal processing methods: wavelet transformation, time-frequency methods, blind source separation, compressive sensing and signal sparsity, local polynomial approximation, intersection of confidence intervals. Application of those methods in image, video and audio processing, feature extraction, noise suppression, and data compression.		
<i>1.2. Course enrolment requirements</i>		
None.		
<i>1.3. Expected learning outcomes</i>		
Analyse the non-stationary signals using the wavelet and time-frequency transformations; Analyse the signals using the independent and principal component analysis; Apply the sparsity constraint for reconstruction of the compressive sensed signals; Apply the local polynomial approximation; Apply the learned methods for the processing of more complex signals (image, video, audio, etc.); Apply the learned methods for the feature extraction, noise suppression and data compression.		
<i>1.4. Course content</i>		
Orthonormal basis for signal representation. Hilbert spaces. Discrete wavelet transformation. Wavelet packets. Image compression. Time-frequency transformations. Definition of the blind source separation. Independent and principal component analysis. Signal sparsity. Compressive sensing. Sparse solution of underdetermined systems. Conditions for the successful signal reconstruction. Algorithms for the l_0 -norm and l_1 -norm minimization. Local polynomial approximation (LPA). Window selection methods based on the intersection of confidence intervals method. LPA based image reconstruction.		
<i>1.5. Manner of instruction</i>	<input type="checkbox"/> lectures <input type="checkbox"/> seminars and workshops <input type="checkbox"/> exercises <input type="checkbox"/> distance learning <input type="checkbox"/> fieldwork	<input checked="" type="checkbox"/> individual assignments <input type="checkbox"/> multimedia and network <input type="checkbox"/> laboratories <input checked="" type="checkbox"/> mentorship <input type="checkbox"/> other
<i>1.6. Comments</i>	---	
<i>1.7. Student responsibilities</i>		
Students are mandatory to make a project, and write a report based on their research under guidance of the course instructor, and attend the oral exam.		

1.8. Monitoring of student work ¹							
Class attendance	0,5	Class participation		Seminar paper	1	Experimental work	
Written exam		Oral exam	1	Essay		Research	3
Project	0,5	Continuous assessment		Report		Practical work	
Portfolio							
1.9. Assessment of learning outcomes in class and at the final exam (procedure and examples)							
Student assessment will be performed based on the results of the project, written report, and the oral exam.							
1.10. Mandatory literature (at the time of submission of study programme proposal)							
D. F. Walnut: <i>An Introduction to Wavelet Analysis</i> , Birkhauser, 2004. A. Hyvarinen, J. Karhunen, E. Oja: <i>Independent Component Analysis</i> , John Wiley & Sons, 2004. S. Foucart, H. Holger: <i>A Mathematical Introduction to Compressive Sensing</i> , Birkhauser, 2013.							
1.11. Optional/additional literature (at the time of submission of the study programme proposal)							
B. Boashash: <i>Time Frequency Signal Analysis and Processing: A Comprehensive Reference 2nd Edition</i> , Elsevier, 2016. V. Katkovnik, K. Egiazarian, J. Astola: <i>Local Approximation Techniques in Signal and Image Processing</i> , SPIE Press, 2006.							
1.12. Number of assigned reading copies in relation to the number of students currently attending the course							
<i>Title</i>						<i>Number of copies</i>	<i>Number of students</i>
D. F. Walnut: <i>An Introduction to Wavelet Analysis</i> , Birkhauser, 2004.						0	
A. Hyvarinen, J. Karhunen, E. Oja: <i>Independent Component Analysis</i> , John Wiley & Sons, 2004.						0	
S. Foucart, H. Holger: <i>A Mathematical Introduction to Compressive Sensing</i> , Birkhauser, 2013.						0	
1.13. Quality monitoring methods that ensure the acquisition of exit knowledge, skills and competences							
Through the Institution's quality assurance system.							

¹ IMPORTANT: Enter the appropriate proportion of ECTS credits for each activity so that the total number of credits equals the ECTS value of the course. Use empty fields for additional activities.

COURSE DESCRIPTION		
Course instructor		
Name of the course	Electromagnetic modeling	
Study programme	Postgraduate university doctoral study in the area of Engineering sciences, in the field of Electrical engineering	
Status of the course	elective	
Year of study	1	
ECTS credits and manner of instruction	ECTS credits	6
	Number of class hours (L+E+S)	15+0+0
<i>1.1. Course objectives</i>		
The objectives of the course are to teach students in principles and techniques of modern computer-aided modeling in electromagnetics. Students will learn how to select and set up a proper numerical technique, build a computational model using a commercial package or by writing their own computer code, simulate and analyze the results.		
<i>1.2. Course enrolment requirements</i>		
None.		
<i>1.3. Expected learning outcomes</i>		
Course participants will learn how to: search databases to acquire necessary information and analyze prior art in preparation to conduct their own research; make their own hypothesis of scientific research; create their own- or apply an existing- scientific method to achieve new scientific results; publish the results of their own research in the form of a scientific article being presented at an international scientific conference, or published in a reputable international journal.		
<i>1.4. Course content</i>		
Review of electromagnetic theory. Classification of electromagnetic (EM) problems. Finite difference method. Finitedifference time-domain method. Boundary conditions. Essentials of the method of moments and finite element method. Timeline of numerical EM methods and codes. CAD modelling: modelling of geometry, description of materials, frequency set-up, relationships between the parameters, stability issues, excitation signal, set up of boundary conditions, symmetry planes, set up of source type, result monitors, analysis of results. Simulation optimization and parameter trade-offs. Essentials of the method of moments and the finite element method.		
<i>1.5. Manner of instruction</i>	<input checked="" type="checkbox"/> lectures <input type="checkbox"/> seminars and workshops <input type="checkbox"/> exercises <input checked="" type="checkbox"/> distance learning <input type="checkbox"/> fieldwork	<input checked="" type="checkbox"/> individual assignments <input type="checkbox"/> multimedia and network <input type="checkbox"/> laboratories <input checked="" type="checkbox"/> mentorship <input type="checkbox"/> other
<i>1.6. Comments</i>		
<i>1.7. Student responsibilities</i>		
Students are required to attend classes, do reading-, homework-, and project- assignments.		

1.8. Monitoring of student work ¹							
Class attendance	0,5	Class participation		Seminar paper		Experimental work	
Written exam		Oral exam		Essay		Research	
Project	2,5	Continuous assessment	3	Report		Practical work	
Portfolio							
1.9. Assessment of learning outcomes in class and at the final exam (procedure and examples)							
Assessment and evaluation of students' work will be based on the success in course assignments.							
1.10. Mandatory literature (at the time of submission of study programme proposal)							
M. N.O. Sadiku, Numerical Techniques in Electromagnetics with MATLAB, CRC Press, 3rd ed., 2009.							
1.11. Optional/additional literature (at the time of submission of the study programme proposal)							
A. Taflove and S. C. Hagness, Computational Electrodynamics: The Finite-Difference Time-Domain Method, 3rd ed, Artech House, 2005.							
A. Elsherbini and Veysel Demir, The Finite-Difference Time-Domain Method for Electromagnetics with MATLAB Simulations, SciTech Publishing, Inc., 2009.							
1.12. Number of assigned reading copies in relation to the number of students currently attending the course							
<i>Title</i>						<i>Number of copies</i>	<i>Number of students</i>
M. N.O. Sadiku, Numerical Techniques in Electromagnetics with MATLAB, CRC Press, 3rd ed., 2009.						1	3
1.13. Quality monitoring methods that ensure the acquisition of exit knowledge, skills and competences							
Through the institution's quality assurance system.							

¹ IMPORTANT: Enter the appropriate proportion of ECTS credits for each activity so that the total number of credits equals the ECTS value of the course. Use empty fields for additional activities.

	Number of class hours (L+E+S)	15+0+0
<i>1.1. Course objectives</i>		
Expand students' knowledge in the field of energy efficiency in all segments of the power system. To enable students to analyse the components of the power system and apply modern technical solutions aimed rational energy usage.		
<i>1.2. Course enrolment requirements</i>		
None.		
<i>1.3. Expected learning outcomes</i>		
Classify different technologies for energy efficiency increase applicable to power system components and subsystems. Mathematically model the components of the power system suitable for calculation of losses and effects of the application of measures for energy efficiency increase (overhead lines, power cables, transformers, loads). Apply current standardization, up-to-date technologies and energy indicators. Suggest advanced control and management concepts for industrial plants. Conduct a techno-economic analysis as basis for proposing measures for power distribution system (overhead lines, power cables, transformers), buildings (management systems) and micro-grids energy efficiency increase. Analyse the power distribution system in terms of electricity quality and energy efficiency.		
<i>1.4. Course content</i>		
Energy efficiency and relevant standardization. Power system components modelling – overhead lines, power cables and power transformers. Building management and control system. Electricity quality issues and indicators. On site generation and microgrids. Electric motors. Electric lighting. Electrical drives and power electronics. Heating, ventilation and air-conditioning systems. Reactive power compensation.		
<i>1.5. Manner of instruction</i>	<input checked="" type="checkbox"/> lectures <input checked="" type="checkbox"/> seminars and workshops <input type="checkbox"/> exercises <input type="checkbox"/> distance learning <input type="checkbox"/> fieldwork	<input checked="" type="checkbox"/> individual assignments <input type="checkbox"/> multimedia and network <input type="checkbox"/> laboratories <input checked="" type="checkbox"/> mentorship <input type="checkbox"/> other
<i>1.6. Comments</i>		
<i>1.7. Student responsibilities</i>		
Students are required to attend classes, write a seminar and access the oral exam.		

1.8. Monitoring of student work ¹							
Class attendance	0.5	Class participation		Seminar paper	2	Experimental work	
Written exam		Oral exam	1.5	Essay		Research	
Project	2	Continuous assessment		Report		Practical work	
Portfolio							
1.9. Assessment of learning outcomes in class and at the final exam (procedure and examples)							
Evaluation of students' work will be based on the results of his seminar work, project and oral exam.							
1.10. Mandatory literature (at the time of submission of study programme proposal)							
A. Sumper, A. Baggini, Electrical energy efficiency, Technologies and applications, Wiley, 2012.							
1.11. Optional/additional literature (at the time of submission of the study programme proposal)							
Garg, A., Bhoi, A.K., Sanjeevikumar, P., Kamani, Advances in Power Systems and Energy Management, Springer, 2016.							
Z. Morvaj, D. Gvozdenac, Ž. Tomšić, Sustavno gospodarenje energijom i upravljanje utjecajima na okoliš u industriji, Energetika marketing, 2016.							
Stojkov M; Šljivac, D; Topić, D ;Trupinić, K.; Alinjak, T; Arsoski, S; Klaić, Z; Kozak, D. Energetski učinkovita rasvjeta Sveučilište J.J. Strossmayera, Elektrotehnički fakultet Osijek, 2016.							
1.12. Number of assigned reading copies in relation to the number of students currently attending the course							
<i>Title</i>						<i>Number of copies</i>	<i>Number of students</i>
A. Sumper, A. Baggini, Electrical energy efficiency, Technologies and applications, Wiley, 2012.						1	1-3
1.13. Quality monitoring methods that ensure the acquisition of exit knowledge, skills and competences							
Through the institution's quality assurance system.							

¹ IMPORTANT: Enter the appropriate proportion of ECTS credits for each activity so that the total number of credits equals the ECTS value of the course. Use empty fields for additional activities.

COURSE DESCRIPTION		
Course instructor		
Name of the course	Intelligent manufacturing systems	
Study programme	Postgraduate university doctoral study in the area of Engineering sciences, in the field of Electrical engineering	
Status of the course	elective	
Year of study	1	
ECTS credits and manner of instruction	ECTS credits	6
	Number of class hours (L+E+S)	15+0+0
<i>1.1. Course objectives</i>		
The student will acquire theoretical and practical knowledge of modelling, simulation and analysis of intelligent complex systems, which is based on the study of specific structures and methods of application of modern architectures of production systems.		
<i>1.2. Course enrolment requirements</i>		
There are no conditions.		
<i>1.3. Expected learning outcomes</i>		
Identify trends in the modern production environment, and define system intelligence according to the individual concepts of modern production systems. Analyze and describe the application of reconfiguration and modularity methodology, with reference to the application of artificial intelligence methods to the optimization of production systems. Implement modern scientific methods for the implementation of virtual reality in the process of design and reconfiguration of the production system, and the relationship between man and production systems. Implement the modeling of complex systems using ready-made software packages.		
<i>1.4. Course content</i>		
Trend analysis in a modern production environment. CIM production analysis; defining the disadvantages of classic CIM production in a modern manufacturing environment. Multi-agent based intelligent manufacturing. Introducing new concepts to address deficiencies in the organization, sharing of information, and running classic CIM production systems; fractal, holonic and biological concept. Fractal Production Systems; Holon Production Systems; definition, Biological Production Systems; definition, basic individuals, problems, application. Introducing the concepts of mass customization and active reconfiguration of production systems. Production systems optimization methods based on artificial intelligence methods. Application of evolutionary computation and advanced machine learning methods in modelling and running modern production systems in real time. Object modelling of production systems. Software for modelling and control of modern production systems.

COURSE DESCRIPTION		
Course instructor		
Name of the course	Intelligent power systems – smart grids	
Study programme	Postgraduate university doctoral study in the area of Engineering sciences, in the field of Electrical engineering	
Status of the course	elective	
Year of study	1	
ECTS credits and manner of instruction	ECTS credits	6
	Number of class hours (L+E+S)	15+0+0
<i>1.1. Course objectives</i>		
The subject aims to teach students about intelligent energy systems – Smart Grids and economic development, and economic aspects of the application of Smart Grids. Students will acquire knowledge in the field of Smart Grids, as well as the specifics of the energy market relations, the importance of the aspects of energy policy and its impact on the development of Smart Grids.		
<i>1.2. Course enrolment requirements</i>		
None.		
<i>1.3. Expected learning outcomes</i>		
Position the Smart Grid concept in the field of transmission and distribution power networks as a hub for distributed generation (renewable energy) integration, Define the term Smart Grid in the context of energy market and analyze the energy policy used to encourage Smart Grid solutions, Identify and classify optimization methods used in Smart Grids and Microgrids and analyze the economic feasibility of Smart Grids' implementation, Create an example model of a Smart Grid or Microgrid, and critically assess, value and propose new models for planning and development of Smart Grids, Explore the possibility of energy storage integration and demand response implementation in intelligent power systems.		
<i>1.4. Course content</i>		
The definition of intelligent power systems (Smart Grid). Overview of existing Smart Grid solutions. Development plan (roadmap) of Intelligent power systems and intelligent measurement systems (Smart Metering). Energy policy used to encourage Smart Grid. Economic evaluation of the Smart Grid implementation in a free energy market environment. Position of Smart Grid in the European energy legislation. Specific features regarding planning, modeling, calculation and operation of intelligent power systems. Procedures for monitoring, analysis and control of power systems in real time. SCADA systems. WAMS systems. Estimation of power system state and topology on the basis of measurement procurement and data analysis. Concept and design of Smart Grids and Microgrids. Demand response. Integration of RES and energy storage in intelligent power systems. The advantages of Smart Grids and Microgrids compared to traditional power system networks. Optimization methods in intelligent power systems and microgrids.		
<i>1.5. COURSE DESCRIPTION		
Course instructor		
Name of the course	Intelligent robots and manipulators	
Study programme	Postgraduate university doctoral study in the area of Engineering sciences, in the field of Electrical engineering	
Status of the course	elective	
Year of study	1	
ECTS credits and manner of instruction	ECTS credits	6
	Number of class hours (L+E+S)	15+0+0
<i>1.1. Course objectives</i>		
<p>The student will gain insight into the current state of robotics, an overview of development trends, applications and directions of development and barriers along the way. Analyse trends in modern robotics. Define the laws of robotics. Position and importance of robotics in modern philosophy of technology. Analyse the construction of industrial robots. Define the operating mode of the robot. Analyse robot management strategies and algorithms. Define the integration of robots into production systems. Analyse robot application, current state and development trends.</p>		
<i>1.2. Course enrolment requirements</i>		
There are no conditions.		
<i>1.3. Expected learning outcomes</i>		
<p>Define and recognize the population, terminology, standardization and norms in robotics. Analyse the structure of industrial robots, with associated kinematics and dynamics. Define and describe robot intelligence, and implement advanced robot management strategies and algorithms. Using artificial methods to apply artificial intelligence to human-robot interaction and the interaction of biological and technical systems. Critically analyse the concepts of biorobotics, microbotics, and biologically inspired ideas and solutions in robotics.</p>		
<i>1.4. Course content</i>		
<p>Foundations of robotics: history, definitions, population, terminology, standardization and norms. The laws of robotics. Position and importance of robotics in modern philosophy of technology. Construction of industrial robots. Robotics kinematics and dynamics. Robot design (design, construction, simulation and calculation). Robot motions. Robot Workplace Organization. Robot Operating Mode: Pose-to-pose, continuous path. Robot end effectors and receivers (material, drives, sensors, flexibility, intelligence). Robot guidance strategy and algorithms. Artificial intelligence in path planning. Optimization of manipulator operations using evolutionary computation. Human-robot interaction. Interaction of biological and technical systems. Robot Programming and Learning. Robot Installation. Integration of robots into production systems. Application of the robot current state and development trends. Bio robotics. Micro robotics. Biologically inspired ideas and solutions in robotics. Generations of industrial robots. Robots in flexible manufacturing / assembly systems. Robotics as part of the CIM system.</p>

COURSE DESCRIPTION		
Course instructor		
Name of the course	Mathematical modeling and numerical methods	
Study programme	Postgraduate university doctoral study in the area of Engineering sciences, in the field of Electrical engineering	
Status of the course	elective	
Year of study	1	
ECTS credits and manner of instruction	ECTS credits	6
	Number of class hours (L+E+S)	15+0+0
<i>1.1. Course objectives</i>		
Knowledge of the mathematical modeling based on the ordinary and partial differential equations and/or on the metamodel, necessary for solving problems in engineering. Knowledge of the chosen numerical methods for data analysis and the use of data-driven methods. Mathematical formulation of the problem, definition of the model and its solving with the aid of appropriate methods and software.		
<i>1.2. Course enrolment requirements</i>		
None.		
<i>1.3. Expected learning outcomes</i>		
Set up a mathematical formulation of the observed problem that is based on differential equations and/or on metamodel, justify the choice of the formulation, analyze the complexity and solvability of the problem. Propose an appropriate numerical model and solve it with the aid of the existing software and/or by writing new software, or build the metamodel using the data-driven algorithms. Critically evaluate and compare the obtained results and independently investigate the possible improvements.		
<i>1.4. Course content</i>		
Models based on ordinary differential equations. System dynamics and chaos. Numerical solution with the finite difference method. Runge-Kutta methods. Models based on partial differential equation in fluid mechanics, thermodynamics and elasticity theory. Variational principle. Conservation laws for mass, momentum and energy applied to continuum mechanics. The concept of metamodels. The chosen numerical methods for solving parabolic, hyperbolic and elliptic differential equations. The chosen numerical methods for data analysis. Data-driven methods for building the metamodels.		
<i>1.5. COURSE DESCRIPTION		
Course instructor		
Name of the course	Measurement and analysis of electric power quality	
Study programme	Postgraduate university doctoral study in the area of Engineering sciences, in the field of Electrical engineering	
Status of the course	elective	
Year of study	1	
ECTS credits and manner of instruction	ECTS credits	6
	Number of class hours (L+E+S)	15+0+02
<i>1.1. Course objectives</i>		
The objectives of the course are to train students for analysis of electric power quality, and to apply, analyze and define new methods for power quality measurement and locating sources of disturbance.		
<i>1.2. Course enrolment requirements</i>		
None.		
<i>1.3. Expected learning outcomes</i>		
Analyse the impact of power quality on the operation of the devices and systems, Analyse existing scientific power quality literature, Apropose hypothesis for scientific research in the field of measurement and evaluation of power quality impact on performance of devices and systems, Apply methods for modelling and simulation of harmonic distortion, Apply advanced methods of spectral analysis, Apply methods for modelling and simulation of electric power systems, Analyse, propose and implement new algorithms for detecting sources of disturbance, Publish scientific paper in relevant international journal or international scientific conference, Assume ethical and social responsibility during research, taking in consideration social importance of research results.		
<i>1.4. Course content</i>		
The power quality definition. Sources of disturbance and impact on equipment. Harmonic distortion. Sources and impact on the equipment. Modelling and simulation of harmonic distortion. Spectral analysis. Application of FFT in the measurements. Analysis of measurement uncertainty for FFT and other measurement algorithms. Advanced methods of spectral analysis. Algorithms for detecting sources of disturbance.		
<i>1.5. Manner of instruction</i>	<input checked="" type="checkbox"/> lectures <input type="checkbox"/> seminars and workshops <input type="checkbox"/> exercises <input type="checkbox"/> distance learning <input type="checkbox"/> fieldwork	<input checked="" type="checkbox"/> individual assignments <input type="checkbox"/> multimedia and network <input type="checkbox"/> laboratories <input checked="" type="checkbox"/> mentorship <input type="checkbox"/> other

Through the institution's quality assurance system.							

¹ IMPORTANT: Enter the appropriate proportion of ECTS credits for each activity so that the total number of credits equals the ECTS value of the course. Use empty fields for additional activities.

COURSE DESCRIPTION							
Course instructor							
Name of the course	Methodology of the scientific-research work						
Study programme	Postgraduate university doctoral study in the area of Engineering sciences, in the field of Electrical engineering						
Status of the course	compulsory						
Year of study	1						
ECTS credits and manner of instruction	ECTS credits		6				
	Number of class hours (L+E+S)		15+0+0				
<i>1.1. Course objectives</i>							
To familiarize student with the scientific method. To learn how to write and peer review scholarly works and research proposals. To understand organizational aspects of science as well as ethics in science. To learn basic skills required for a scientists..							
<i>1.2. Course enrolment requirements</i>							
None							
<i>1.3. Expected learning outcomes</i>							
To organize research. Critically evaluate methods used in science. To write a scientific paper and a research proposal. To conduct a peer review of a scholarly work.							
<i>1.4. Course content</i>							
Research and other elements of the scientific method. Critical thinking. Analysis and synthesis. Deduction and induction. Scientific communication. Elements of a scientific paper. Peer review. Open science. Preparing the research proposal. Writing and organizing a bibliography. Citations and References. Ph.D. thesis. Science and research in the Republic of Croatia and the world. Software tools for scientists. Ethics in science.							
<i>1.5. Manner of instruction</i>	<input checked="" type="checkbox"/> lectures <input checked="" type="checkbox"/> seminars and workshops <input type="checkbox"/> exercises <input type="checkbox"/> distance learning <input type="checkbox"/> fieldwork			<input checked="" type="checkbox"/> individual assignments <input type="checkbox"/> multimedia and network <input type="checkbox"/> laboratories <input checked="" type="checkbox"/> mentorship <input type="checkbox"/> other			
	<i>1.6. Comments</i>						
-							
<i>1.7. Student responsibilities</i>							
Students are required to attend the classes/consultations. Each student will be given a project task. Students should write and present the seminar paper.							
<i>1.8. Monitoring of student work¹</i>							
Class attendance	0,5	Class participation		Seminar paper	4	Experimental work	
Written exam		Oral exam		Essay		Research	
Project	1,5	Continuous		Report		Practical work

COURSE DESCRIPTION							
Course instructor							
Name of the course	Mixed signal processing						
Study programme	Postgraduate university doctoral study in the area of Engineering sciences, in the field of Electrical engineering						
Status of the course	elective						
Year of study	1						
ECTS credits and manner of instruction	ECTS credits	6					
	Number of class hours (L+E+S)	15+0+0					
<i>1.1. Course objectives</i>							
Course objective is introduction to analog and digital signal processing systems. Attention will be set on analysis of existing solutions as well as on finding possibilities for new solutions with enhanced characteristics.							
<i>1.2. Course enrolment requirements</i>							
None.							
<i>1.3. Expected learning outcomes</i>							
After passing of exam, student will be able to: Make analysis and design of new analog high order filters in different structures with enhanced characteristics. Make analysis and design of new switch capacitors filters with enhanced characteristics. Make analysis and design of new circuits for A/D and D/A signal conversion with enhanced characteristics.							
<i>1.4. Course content</i>							
Analog and digital signal processing systems. Filters based on operational and transconduction amplifiers. Switch capacitor filters. A/D converters, principle of operation. D/A converters, principle of operation.							
<i>1.5. COURSE DESCRIPTION		
Course instructor		
Name of the course	Modelling of electrical power transmission and distribution systems	
Study programme	Postgraduate university doctoral study in the area of Engineering sciences, in the field of Electrical engineering	
Status of the course	elective	
Year of study	1	
ECTS credits and manner of instruction	ECTS credits	6
	Number of class hours (L+E+S)	15+0+0
<i>1.1. Course objectives</i>		
The objectives of the course are to provide theoretical and practical knowledge to the students for solving different technical problems in the fields of planning, design and control of distribution system, as well as analysis and design of low-voltage electrical installations.		
<i>1.2. Course enrolment requirements</i>		
None.		
<i>1.3. Expected learning outcomes</i>		
<p>Develop mathematical models of transmission and distribution network elements and apply them for network calculations in specific operating conditions</p> <p>Analyse and revise existing methods for transmission and distribution network planning and development; select and apply new methods</p> <p>Analyse and develop solutions for protection, automation, control and asset management of transmission and distribution networks</p> <p>Propose new solutions for consumer plants and installations; analyse the risks and hazards inherent with electric power, and propose relevant safety practices</p> <p>Analyse, propose and implement modern solutions for electrical power transmission, distribution and consumption systems</p>		
<i>1.4. Course content</i>		
<p>Power transmission and distribution system structure. Consumption of electrical energy. Customer's load profiles. Methods for calculation of peak load. Power line or power transformer loads. Mathematical models for transmission and distribution power line, power transformer and customer's load profile. Calculation methods for load flow and voltage profile in normal (steady state) and disturbed states. Calculation with symmetrical and asymmetrical loads. Distributed generation. Planning and design of transmission networks. Planning and design of distribution networks. Optimal transmission and distribution system control (Asset management). Economics of transmission and distribution system. Protection, automation and control of distribution system. Electric power quality. Low-voltage electrical installations planning and design. Smart electrical installations. Risks and hazards of electrical energy. Protection and security at work.</p>		
<i>1.5. Manner of instruction</i>	<input checked="" type="checkbox"/> lectures <input type="checkbox"/> seminars and workshops <input type="checkbox"/> exercises <input type="checkbox"/> distance learning <input type="checkbox"/> fieldwork	<input checked="" type="checkbox"/> individual assignments <input type="checkbox"/> multimedia and network <input type="checkbox"/> laboratories <input checked="" type="checkbox"/> mentorship <input type="checkbox"/> other
<i>1.6. Comments</i>		

1.7. Student responsibilities

Students are required to attend classes, write a seminar and a project and access the oral exam. Seminar and project to be done in consultation with the teacher.

1.8. Monitoring of student work¹

Class attendance	0,5	Class participation		Seminar paper	1	Experimental work	
Written exam		Oral exam	2,5	Essay		Research	
Project	2	Continuous assessment		Report		Practical work	
Portfolio							

1.9. Assessment of learning outcomes in class and at the final exam (procedure and examples)

Assessment and evaluation of students' work will be done based on the results of their seminar, project and oral exam.

1.10. Mandatory literature (at the time of submission of study programme proposal)

Available scientific papers from journals with high impact factor are used.

1.11. Optional/additional literature (at the time of submission of the study programme proposal)

J.D. Glover, M.S. Sarma, T.J. Overbye: Power System Analysis & Design, Cengage Learning 2008.
 N.D. Tleis: Power Systems Modelling and Fault Analysis, Elsevier 2008.
 T. A. Short: Electric Power Distribution Handbook, 2nd Edition, CRC Press, 2014.
 E. Lakervi, E.J. Holmes: Electricity Distribution Network Design, Peter Peregrinus Ltd, London, 1995.
 Kersting, W.H.: Distribution System Modelling and Analysis, CRC Press, London, 2002.

1.12. Number of assigned reading copies in relation to the number of students currently attending the course

Title	Number of copies	Number of students

1.13. Quality monitoring methods that ensure the acquisition of exit knowledge, skills and competences

Through the institution's quality assurance system.

¹ IMPORTANT: Enter the appropriate proportion of ECTS credits for each activity so that the total number of credits equals the ECTS value of the course. Use empty fields for additional activities.

COURSE DESCRIPTION		
Course instructor		
Name of the course	Nonstationary signal analysis and processing	
Study programme	Postgraduate university doctoral study in the area of Engineering sciences, in the field of Electrical engineering	
Status of the course	elective	
Year of study	1	
ECTS credits and manner of instruction	ECTS credits	6
	Number of class hours (L+E+S)	15+0+0
<i>1.1. Course objectives</i>		
The students will get familiar with the basic concepts of nonstationary signals analysis and processing using time- frequency distributions (TFDs). TFD design techniques, measures of signal quality representation based on its TFDs, as well as the algorithms for signal nonstationary parameters estimation will be studied in details.		
<i>1.2. Course enrolment requirements</i>		
None.		
<i>1.3. Expected learning outcomes</i>		
Define the signal, its key parameters and properties in the time-frequency domain ^[1] _[SEP] Describe the advantages of signal time-frequency analysis ^[1] _[SEP] Describe the heuristic methods for time-frequency distributions (TFDs) definitions, including the spectrogram and the Wigner-Ville distribution ^[1] _[SEP] Define the Quadratic class of TFDs and its properties ^[1] _[SEP] Describe various interference terms present in a TFD and the methods for their suppression Apply various TFD design techniques ^[1] _[SEP] Define concentration and complexity measures for TFDs ^[1] _[SEP] Estimate the instantaneous frequency of a signal from its time-frequency representations ^[1] _[SEP] Apply time-frequency tools in the analysis and processing of real-life nonstationary signals		
<i>1.4. Course content</i>		
Time-frequency concepts; advantages of time-frequency representations of signals. The formulation and characteristics of signals in the time-frequency domain; nonstationarity, the Hilbert transform, the analytic signal, monocomponent and multicomponent signals, the signal instantaneous frequency. Heuristic methods of time-frequency distribution (TFDs) definitions; the Wigner-Ville distribution, the short-time Fourier transformation, the spectrogram. Theory of the Quadratic class of time-frequency distributions; definitions, properties, and examples. Design of quadratic time-frequency distributions; interference terms, the ambiguity function, desirable properties for practical applications, TFDs with separable filters. Adaptive TFDs and higher-order TFDs. Concentration and complexity measures for time-frequency representations. Time-frequency techniques for signal instantaneous frequency estimation. Examples of real-life signals time-frequency analysis. Software packages for nonstationary signals time-frequency analysis.		
<i>1.5. COURSE DESCRIPTION		
Course instructor		
Name of the course	Optimization methods	
Study programme	Postgraduate university doctoral study in the area of Engineering sciences, in the field of Electrical engineering	
Status of the course	elective	
Year of study	1	
ECTS credits and manner of instruction	ECTS credits	6
	Number of class hours (L+E+S)	15+0+0
<i>1.1. Course objectives</i>		
Identification of optimization problems in engineering practice and scientific research. Mathematically set optimization problems and solve them using appropriate methods and software.		
<i>1.2. Course enrolment requirements</i>		
None.		
<i>1.3. Expected learning outcomes</i>		
Set up a mathematical formulation of an optimization problem, analyze and evaluate the complexity and solvability of the problem based on the formulation. Investigate the possibilities of applying particular methods to a given optimization problem and choose the appropriate method. Build a computer code that represents the implementation of the goals and constraints of the optimization problem (goal function). Explore problem-solving capabilities by using ready-made software and / or writing your own implementation of the optimization method. Solve the optimization problem and analyze the results of optimization, identify the causes of possible handicaps in implementation and formulation, improve the accuracy of the results with combination and variation of methods and approaches.		
<i>1.4. Course content</i>		
Optimization problems in technology. Optimization problem formulation: optimization variables, objectives, and constraints. Problems of optimal management of stationary phenomena. Problems of optimal management of non-stationary phenomena. Optimal design problems. Model parameter calibration problems. Optimization problems of permutation type and optimal clustering. Treatment of restrictions. Optimization methods and the notion of a black box. Methods based on the objective function gradient. Methods of direct search and sample search. Combinatorial methods. Heuristic methods. Evolutionary optimization methods. Swarm intelligence based methods. Software for solving optimization problems.		
<i>1.5. Manner of instruction</i>	<input checked="" type="checkbox"/> lectures <input checked="" type="checkbox"/> seminars and workshops <input type="checkbox"/> exercises <input type="checkbox"/> distance learning <input type="checkbox"/> fieldwork	<input checked="" type="checkbox"/> individual assignments <input type="checkbox"/> multimedia and network <input type="checkbox"/> laboratories <input checked="" type="checkbox"/> mentorship <input type="checkbox"/> other

COURSE DESCRIPTION		
Course instructor		
Name of the course	Photonic devices	
Study programme	Postgraduate university doctoral study in the area of Engineering sciences, in the field of Electrical engineering	
Status of the course	elective	
Year of study	1	
ECTS credits and manner of instruction	ECTS credits	6
	Number of class hours (L+E+S)	15+0+0
<i>1.1. Course objectives</i>		
<p>Superior knowledge of the photonic devices, technology and state-of-the arts in photonics. Deepened (superior) knowledge of the physical concept needed to understand the working principles of photonic elements. Monitoring, selection and knowledge of scientific literature identifying unresolved issues. Designing and conducting original scientific research (within the project) by numerical modelling based on the physics and technology of photonic devices, and an explanation of the physical phenomena crucial for the operation of photonic devices. Presentation of the results of research project to colleagues and experts in the field. Ability to continue independent research in line with challenges in the field of photonics.</p>		
<i>1.2. Course enrolment requirements</i>		
Enrolment in the current academic year of postgraduate doctoral study. Recommended basic knowledge on semiconductor devices and optoelectronics.		
<i>1.3. Expected learning outcomes</i>		
<p>Preknowledge, gained from lectures and from literature, for the further development of models, methods and research procedures in the field of photonics. By applying the selected scientific method, contribute to the understanding of the principles of operation and use of modern photonic devices. In the narrower field of photonics (project assignment), specific research work with the hypothesis set, and accepting or rejecting the set hypothesis, and regularly reporting on the achieved.</p>		
<i>1.4. Course content</i>		
<p>Introduction: Overview of the state-of-the art in photonics and the trend in photonics development. Light; Models and light properties. Photonic device materials. Optical process in semiconductors, absorption and emission of light, defects and their influence on the devices physical properties, recombinations of free charge carriers. Light sources: LED, laser, LD; Photodetectors: Photodiodes, Photovoltaic sources: Solar cells. Fiber optics. Integrated photonics: APS, biosensors. Numerical modelling of physical processes and photonics devices. Photonic devices technology. Color detection and recognition with application in image sensors, biosensors. Methods of photodiodes and solar cells parameter extraction. The possible updates and upgrades of the course contents with specific photonics topics in project works.</p>		
<i>1.5. Manner of instruction</i>	<input checked="" type="checkbox"/> lectures <input type="checkbox"/> seminars and workshops <input type="checkbox"/> exercises <input type="checkbox"/> distance learning <input type="checkbox"/> fieldwork	<input checked="" type="checkbox"/> individual assignments <input type="checkbox"/> multimedia and network <input type="checkbox"/> laboratories <input checked="" type="checkbox"/> mentorship <input type="checkbox"/> other
<i>1.6. Comments</i>		

1.7. Student responsibilities

Active participation in teaching, drafting and presenting a project assignment to other students, independently finding and studying literature, and identifying problems in the scientific field. Designing project work in consultation with the teacher. Possible publication of a scientific paper resulting from a project assignment.

1.8. Monitoring of student work¹

Class attendance	0.5	Class participation		Seminar paper		Experimental work	
Written exam		Oral exam	2.5	Essay		Research	1
Project	2	Continuous assessment		Report		Practical work	
Portfolio							

1.9. Assessment of learning outcomes in class and at the final exam (procedure and examples)

Assessment and evaluation based on the literature found, the results of the project work, the oral exam.

1.10. Mandatory literature (at the time of submission of study programme proposal)

S. M.Sze, K.K. Ng, Physics of Semiconductor Devices, J.Wiley & Sons, Inc. 2007.
 S. L. Chuang, Physics of Photonic Devices, J.Wiley & Sons, Inc. 2009.
 B.E.A. Saleh, M.C. Teich, Fundamentals of Photonics, J.Wiley & Sons, Inc. 2007.
 A. Kitai, Principles of Solar Cells, LEDs and Related Devices, J. Wiley & Sons Ltd, 2019.
 H Yu, M. Yan, X. Huang, CMOS Integrated Lab-on-Chip system for personalized biomedical diagnosis

1.11. Optional/additional literature (at the time of submission of the study programme proposal)

K. Tomizawa, Numerical Simulation of Submicron Semiconductor Devices, Artech House, Boston, London 1993.
 IEEE Transactions on Electron Devices, IEEE Electron Device Letters.
 Scientific papers IEEE, IAP, Elsevier, example Solid-State Electronics etc.

1.12. Number of assigned reading copies in relation to the number of students currently attending the course

Title	Number of copies	Number of students
S. M.Sze, K.K. Ng, Physics of Semiconductor Devices, J.Wiley & Sons, Inc. 2007.	1	3
S. L. Chuang, Physics of Photonic Devices, J.Wiley & Sons, Inc. 2009.	1	3
B.E.A. Saleh, M.C. Teich, Fundamentals of Photonics, J.Wiley & Sons, 2007.	1	3
A. Kitai, Principles of Solar Cells, LEDs and Related Devices, J. Wiley & Sons Ltd, 2019.	1	3
H Yu, M. Yan, X. Huang, CMOS Integrated Lab-on-Chip system for personalized biomedical diagnosis	1	3

1.13. Quality monitoring methods that ensure the acquisition of exit knowledge, skills and competences

Through the institution's quality assurance system.

¹ IMPORTANT: Enter the appropriate proportion of ECTS credits for each activity so that the total number of credits equals the ECTS value of the course. Use empty fields for additional activities.

COURSE DESCRIPTION		
Course instructor		
Name of the course	Power system optimization	
Study programme	Postgraduate university doctoral study in the area of Engineering sciences, in the field of Electrical engineering	
Status of the course	elective	
Year of study	1	
ECTS credits and manner of instruction	ECTS credits	6
	Number of class hours (L+E+S)	15+0+0
<i>1.1. Course objectives</i>		
Expand students' knowledge in the field of modern power systems operation, and present possible approaches related to application of optimization techniques. Apply a suitable optimization technique for problem solving. Definition of the objective function and associated constraints. Solve optimization problems using existing algorithms and available optimization tools.		
<i>1.2. Course enrolment requirements</i>		
None.		
<i>1.3. Expected learning outcomes</i>		
Independently search and analyse scientific literature in the domain of power system optimization. Model an optimization problem by defining the objective function and corresponding constraints, thus finding the solution using ready-made algorithms and computer tools. Systematize and analyse obtained solutions and choose the final solution of the optimization problem. Critically consider new optimization methods for power system optimization.		
<i>1.4. Course content</i>		
Basic terms and definitions. Introduction to optimization and mathematical programming. Formulation of the optimization problem - modelling of the transmission grid, generators, consumption and energy storage facilities. Problem types and optimization methods. Overview of optimization algorithms applicable to power systems. Linear, mixed integer and nonlinear programming. Intelligent search methods. Optimum power flows. Reactive power optimization. Unit commitment and economic dispatch in power system. Application of readymade algorithms and computer tools. Optimization of power system operation in extended real-time.		
<i>1.5. Manner of instruction</i>	<input checked="" type="checkbox"/> lectures <input checked="" type="checkbox"/> seminars and workshops <input type="checkbox"/> exercises <input type="checkbox"/> distance learning <input type="checkbox"/> fieldwork	<input checked="" type="checkbox"/> individual assignments <input type="checkbox"/> multimedia and network <input type="checkbox"/> laboratories <input checked="" type="checkbox"/> mentorship <input type="checkbox"/> other
<i>1.6. Comments</i>		
<i>1.7. Student responsibilities</i>		
Students are required to attend classes, write a seminar and access the oral exam.		

1.8. Monitoring of student work ¹							
Class attendance	0.5	Class participation		Seminar paper	2	Experimental work	
Written exam		Oral exam	1.5	Essay		Research	
Project	2	Continuous assessment		Report		Practical work	
Portfolio							
1.9. Assessment of learning outcomes in class and at the final exam (procedure and examples)							
Evaluation of students' work will be based on the results of his seminar work, project and oral exam.							
1.10. Mandatory literature (at the time of submission of study programme proposal)							
Jizhong Zhu: Optimization of power system operation, Wiley, IEEE Press, Hoboken, New Jersey, 2015.							
1.11. Optional/additional literature (at the time of submission of the study programme proposal)							
S.A.-H. Soliman, A.-A.H. Mantawy, Modern optimization techniques with applications in Electric power systems, Springer 2012.							
A.J. Momoh, Electric power system applications and optimization, CRC Press, Taylor&Francis Group, Boca Raton, Florida, 2009.							
1.12. Number of assigned reading copies in relation to the number of students currently attending the course							
<i>Title</i>					<i>Number of copies</i>	<i>Number of students</i>	
Jizhong Zhu: Optimization of power system operation, Wiley, IEEE Press, Hoboken, New Jersey, 2015.					1	1-3	
1.13. Quality monitoring methods that ensure the acquisition of exit knowledge, skills and competences							
Through the institution's quality assurance system.							

¹ IMPORTANT: Enter the appropriate proportion of ECTS credits for each activity so that the total number of credits equals the ECTS value of the course. Use empty fields for additional activities.

COURSE DESCRIPTION		
Course instructor		
Name of the course	Reliability of technical systems	
Study programme	Postgraduate university doctoral study in the area of Engineering sciences, in the field of Electrical engineering	
Status of the course	elective	
Year of study	1	
ECTS credits and manner of instruction	ECTS credits	6
	Number of class hours (L+E+S)	15+0+0
<i>1.1. Course objectives</i>		
A thorough knowledge of content related to the reliability of technical systems. Developing a student's ability to independently analyze and evaluate the reliability of a technical system.		
<i>1.2. Course enrolment requirements</i>		
None.		
<i>1.3. Expected learning outcomes</i>		
Creating and evaluating new concepts, facts and principles in reliability theory and developing an experimental method for determining reliability. Using advanced knowledge and skills in modelling the reliability of systems with independent components and analyzing the reliability of systems with dependent components. Development of new ideas through the analysis of safety and risk of technical systems, the parameter of reliability as well as the design of fault trees of complex technical systems.		
<i>1.4. Course content</i>		
Basic concepts of reliability theory: component reliability, failure probability density functions, and failure rates. Reliability modelling of systems with independent components. (Serial, parallel and combined configuration). Mathematical models for calculating the reliability and availability of complex systems. Reliability of systems with dependent components. Backup system. Markov models. System with repairable components. Safety and risk analysis of technical systems. Concept of technical system efficiency, definition of efficiency parameters. Reliability analysis and failure tree analysis of complex technical systems. Experimental methods for determining reliability.		
<i>1.5. Manner of instruction</i>	<input checked="" type="checkbox"/> lectures <input type="checkbox"/> seminars and workshops <input type="checkbox"/> exercises <input type="checkbox"/> distance learning <input type="checkbox"/> fieldwork	<input checked="" type="checkbox"/> individual assignments <input type="checkbox"/> multimedia and network <input type="checkbox"/> laboratories <input checked="" type="checkbox"/> mentorship <input type="checkbox"/> other
<i>1.6. Comments</i>	-	
<i>1.7. Student responsibilities</i>		
Attendance in class (consultations), project assignment, preparation and presentation of seminars, and oral examination.		
<i>1.8. Monitoring of student work¹</i>		

¹ IMPORTANT: Enter the appropriate proportion of ECTS credits for each activity so that the total number of credits equals the ECTS value of the course. Use empty fields for additional activities.

COURSE DESCRIPTION		
Course instructor		
Name of the course	Selected chapters on energy components and systems of renewable energy sources	
Study programme	Postgraduate university doctoral study in the area of Engineering sciences, in the field of Electrical engineering	
Status of the course	elective	
Year of study	1	
ECTS credits and manner of instruction	ECTS credits	6
	Number of class hours (L+E+S)	15+0+0
<i>1.1. Course objectives</i>		
The objectives of the course are to train students for critical analysis, implementation and planning of production plants using renewable energy sources (RES) and to indicate the global importance of RES as compared to conventional energy sources regarding RES's ecological advantage, technical and technological characteristics, legislative and economic/financial indicators and problems.		
<i>1.2. Course enrolment requirements</i>		
None.		
<i>1.3. Expected learning outcomes</i>		
Apply modern technologies in the field of renewable energy sources and assess RES potential, Apply methods of techno-economic analysis by RES projects development, Apply modern concepts for RES interconnection with the utility grid, Analysis and assessment of RES impact on the electric power system, Apply methods for energy efficiency improvement.		
<i>1.4. Course content</i>		
Renewable energy source definition. Solar energy. Eolic energy. Hydro energy. Biomass, waste and biofuel energy. Geothermal energy. Other renewable energy sources. Techno-economic analysis of production plants using RES. Issues concerning RES interconnection with the public utility grid (transmission and distribution grid). RES production plant operation impact on the public utility grid. Energy efficiency definition and practical implementation.		
<i>1.5. Manner of instruction</i>	<input checked="" type="checkbox"/> lectures <input type="checkbox"/> seminars and workshops <input type="checkbox"/> exercises <input type="checkbox"/> distance learning <input type="checkbox"/> fieldwork	<input checked="" type="checkbox"/> individual assignments <input type="checkbox"/> multimedia and network <input type="checkbox"/> laboratories <input checked="" type="checkbox"/> mentorship <input type="checkbox"/> other
<i>1.6. Comments</i>		
<i>1.7. Student responsibilities</i>		
Students are required to attend classes, write a seminar and a project and access the oral exam. Seminar and project to be done in consultation with the teacher.		
<i>1.8. Monitoring of student work¹</i>		

¹ IMPORTANT: Enter the appropriate proportion of ECTS credits for each activity so that the total number of credits equals the ECTS value of the course. Use empty fields for additional activities.

Class attendance	0,5	Class participation		Seminar paper	2	Experimental work	
Written exam		Oral exam	1,5	Essay		Research	
Project	2	Continuous assessment		Report		Practical work	
Portfolio							

1.9. Assessment of learning outcomes in class and at the final exam (procedure and examples)

Assessment and evaluation of students' work will be done on the basis of the results of their seminar, project and oral exam.

1.10. Mandatory literature (at the time of submission of study programme proposal)

Lj. Majdandžić; Obnovljivi izvori energije, Graphis, Zagreb, 2008.

P. Kulišić; Novi izvori energije-sunčana energija i energija vjetra, Školska knjiga, Zagreb, 1991.

A. Rub: Power Electronics for Renewable Energy Systems, Transportation and Industrial Applications, IEEE, Wiley, 2014

1.11. Optional/additional literature (at the time of submission of the study programme proposal)

Grupa autora: SUNEN - Program korištenja energije sunca, Energetski institut Hrvoje Požar, Zagreb.

Grupa autora: ENWIND - Program korištenja energije vjetra, Energetski institut Hrvoje Požar, Zagreb.

Grupa autora: BIOEN - Program korištenja energije biomase i otpada, Energetski institut Hrvoje Požar, Zagreb.

Grupa autora: MAHE - Program izgradnje malih hidroelektrana, Energetski institut Hrvoje Požar, Zagreb.

Grupa autora: GEOEN - Program korištenja geotermalne energije, Energetski institut Hrvoje Požar, Zagreb.

1.12. Number of assigned reading copies in relation to the number of students currently attending the course

<i>Title</i>	<i>Number of copies</i>	<i>Number of students</i>
Lj. Majdandžić; Obnovljivi izvori energije, Graphis, Zagreb, 2008	0	3-5
P. Kulišić; Novi izvori energije-sunčana energija i energija vjetra, Školska knjiga, Zagreb, 1991	0	3-5

1.13. Quality monitoring methods that ensure the acquisition of exit knowledge, skills and competences

Through the institution's quality assurance system.

COURSE DESCRIPTION								
Course instructor								
Name of the course	Service robotics							
Study programme	Postgraduate university doctoral study in the area of Engineering sciences, in the field of Electrical engineering							
Status of the course	elective							
Year of study	1							
ECTS credits and manner of instruction	ECTS credits		6					
	Number of class hours (L+E+S)		15+0+0					
<i>1.1. Course objectives</i>								
<p>The objectives of this course are to teach students about service robotics through lectures and implementations of a robotic system; teach students how to program a robotic system; and teach students how to simulate a robotic system using a robotic simulation platform.</p> <p>The goal is helping students to design, simulate, build and program a robot for effective solutions of selected problems in service robotics.</p>								
<i>1.2. Course enrolment requirements</i>								
None.								
<i>1.3. Expected learning outcomes</i>								
<p>Identify service robot components, sensors and support systems; Model a robot and its components in a simulated environment; Program a service robot using high level programming language.</p>								
<i>1.4. Course content</i>								
Service robotics applications. Service robot components and subsystems. Methods of controlling and interfacing to robots. Robot programming. Robotic toolkit and simulation platform. Selected applications.								
<i>1.5. Manner of instruction</i>	<input checked="" type="checkbox"/> lectures		<input checked="" type="checkbox"/> individual assignments			<input checked="" type="checkbox"/> mentorship		
	<input checked="" type="checkbox"/> seminars and workshops		<input type="checkbox"/> multimedia and network			<input type="checkbox"/> laboratories		
<input type="checkbox"/> exercises		<input type="checkbox"/> distance learning			<input checked="" type="checkbox"/> other			
<input type="checkbox"/> fieldwork								
<i>1.6. Comments</i>								
<i>1.7. Student responsibilities</i>								
Students are required to attend classes, select or propose a project and present their work through formal presentation.								
<i>1.8. Monitoring of student work¹</i>								
Class attendance	0.5	Class participation		Seminar paper		Experimental work		
Written exam		Oral exam	2	Essay		Research		

¹ IMPORTANT: Enter the appropriate proportion of ECTS credits for each activity so that the total number of credits equals the ECTS value of the course. Use empty fields for additional activities.

Project	3.5	Continuous assessment		Report		Practical work	
Portfolio							
1.9. Assessment of learning outcomes in class and at the final exam (procedure and examples)							
Assessment and evaluation of students' work will be done on the basis of the results of their project and oral exam							
1.10. Mandatory literature (at the time of submission of study programme proposal)							
R. Siegwart et al, Introduction to Autonomous Mobile Robots (second edition), MIT Press, Cambridge, 2011							
1.11. Optional/additional literature (at the time of submission of the study programme proposal)							
1.12. Number of assigned reading copies in relation to the number of students currently attending the course							
<i>Title</i>					<i>Number of copies</i>		<i>Number of students</i>
R. Siegwart et al, Introduction to Autonomous Mobile Robots (second edition), MIT Press, Cambridge, 2011					1		1
1.13. Quality monitoring methods that ensure the acquisition of exit knowledge, skills and competences							
Through the institution's quality assurance system							

COURSE DESCRIPTION		
Course instructor		
Name of the course	Statistical methods and stochastic processes	
Study programme	Postgraduate university doctoral study in the area of Engineering sciences, in the field of Electrical engineering	
Status of the course	elective	
Year of study	1	
ECTS credits and manner of instruction	ECTS credits	6
	Number of class hours (L+E+S)	15+0+0
<i>1.1. Course objectives</i>		
Knowledge about basic principles in statistical methods needed for the analysis of data obtained from different engineering problems. Introduction to stochastic processes. Data manipulation and the analysis of statistical data by applying acquired methods within statistical engineering software's, modeling of engineering problems as stochastic processes.		
<i>1.2. Course enrolment requirements</i>		
None.		
<i>1.3. Expected learning outcomes</i>		
Independently explore the possibilities of applying different statistical methods or stochastic processes in the observed problem. Set up a problem formulation for the application of the selected methods, implement the methods, critically evaluate and compare the obtained results. Review the behavior of the system by applying theoretical knowledge and independently investigate possible improvements of the system.		
<i>1.4. Course content</i>		
Elements of statistical inferences: Bayesian methods, sample based methods, statistical estimation, parametric and nonparametric tests, analysis of variance, multidimensional random variables, regression and correlation analysis. Matrix methods in statistics. Statistical methods by using statistical software. Stochastic processes. Markov processes and Markov chains. Birth and death processes. Queuing systems. Stationary stochastic processes. Correlation theory. Some applications in engineering.		
<i>1.5. Manner of instruction</i>	<input checked="" type="checkbox"/> lectures <input checked="" type="checkbox"/> seminars and workshops <input type="checkbox"/> exercises <input type="checkbox"/> distance learning <input type="checkbox"/> fieldwork	<input checked="" type="checkbox"/> individual assignments <input type="checkbox"/> multimedia and network <input type="checkbox"/> laboratories <input checked="" type="checkbox"/> mentorship <input type="checkbox"/> other
<i>1.6. Comments</i>		
<i>1.7. Student responsibilities</i>		
Course attendance (consultations), solving project assignment, preparing and presenting the seminar.		
<i>1.8. Monitoring of student work¹</i>		

¹ IMPORTANT: Enter the appropriate proportion of ECTS credits for each activity so that the total number of credits equals the ECTS value of the course. Use empty fields for additional activities.

Class attendance	0,5	Class participation		Seminar paper	1,5	Experimental work	
Written exam		Oral exam		Essay		Research	
Project	4	Continuous assessment		Report		Practical work	
Portfolio							

1.9. Assessment of learning outcomes in class and at the final exam (procedure and examples)

Course attendance, project, seminar paper.

1.10. Mandatory literature (at the time of submission of study programme proposal)

Montgomery, D.C., Runger, G.C.: Applied Statistics and Probability for Engineers, Wiley, New York, 2003.
 Devore, J.L.: Probability and Statistics for Engineering and the Sciences, Duxbury Press, 1995.
 Yates, Goodman, Probability and Stochastic Processes: a friendly introduction for electrical and computer engineers, Wiley, 2005.

1.11. Optional/additional literature (at the time of submission of the study programme proposal)

Leon-Garcia, Alberto: Probability, statistics, and random processes for electrical engineering, Pearson Education, Inc., 2008.
 Elezović, N.: Statistika i procesi, FER, Element, Zagreb 2008.

1.12. Number of assigned reading copies in relation to the number of students currently attending the course

<i>Title</i>	<i>Number of copies</i>	<i>Number of students</i>
Montgomery, D.C., Runger, G.C.: Applied Statistics and Probability for Engineers, Wiley, New York, 2003.	1	1
Devore, J.L.: Probability and Statistics for Engineering and the Sciences, Duxbury Press, 1995.	1	1
Yates, Goodman, Probability and Stochastic Processes: a friendly introduction for electrical and computer engineers, Wiley, 2005.	1	1

1.13. Quality monitoring methods that ensure the acquisition of exit knowledge, skills and competences

Through the Institution's quality assurance system.

COURSE DESCRIPTION		
Course instructor		
Name of the course	The elements of energy transition	
Study programme	Postgraduate university doctoral study in the area of Engineering sciences, in the field of Electrical engineering	
Status of the course	elective	
Year of study	1	
ECTS credits and manner of instruction	ECTS credits	6
	Number of class hours (L+E+S)	15+0+0
<i>1.1. Course objectives</i>		
<p>Training the trainees for these extraordinary times for global energy. As societies are coming to terms with the need to build a different kind of energy system than we've had in the past – one based not only on affordability and reliability, but also sustainability – a series of major trends are profoundly reshaping the energy sector. These include continued cost reductions for clean energy technologies, notably solar PV, wind and batteries, and the rapidly increasing importance of digital technologies and electricity.</p>		
<i>1.2. Course enrolment requirements</i>		
None.		
<i>1.3. Expected learning outcomes</i>		
<p>Conceptualize the growing share of renewable energy sources in electricity systems; Work on the flexibility of electrical energy systems; Model a future electricity market; Propose new energy market regulation policies; Design platform collaboration between private sector and policy makers to develop market reform. Collaborate in the development of technical-socio-economic analyzes to stimulate investments in renewable energy sources and grids and increase the use of innovative technologies.</p>		
<i>1.4. Course content</i>		
<p>Key elements of the energy transition:</p> <ol style="list-style-type: none"> 1. Supporting the pathway for transforming the global energy sector from fossil to zero-carbon. 2. Creating a stimulating technical, technological, economic and social context for energy transition. 3. Key features that make the electrical system central to energy transition. 4. An innovative model for assessing the socio-economic effects of the energy transition by 2030 in the EU28 and Croatia (S-E Europe). 5. Effect of energy transition on existing technological value chains in the European Union and Croatia (S-E Europe). 6. Creating new digital services in the energy transition. 7. Effects of energy transition in terms of industrial production and employment in the European Union and Croatia (S-E Europe). 8. The transition of energy by electrification and will improve the environment and human health. 9. Challenges and benefits associated with energy transition: preserving Europe's industrial competitiveness and avoiding negative distributional effects. 10. Identifying energy policy issues in order to effectively address the challenges associated with energy transition and redistribute its benefits by ensuring a "for all" transition. 		
<i>1.5. Manner of instruction</i>	<input checked="" type="checkbox"/> lectures	<input checked="" type="checkbox"/> individual assignments

	<input checked="" type="checkbox"/> seminars and workshops <input type="checkbox"/> exercises <input type="checkbox"/> distance learning <input type="checkbox"/> fieldwork		<input type="checkbox"/> multimedia and network <input type="checkbox"/> laboratories <input checked="" type="checkbox"/> mentorship <input type="checkbox"/> other				
1.6. Comments							
1.7. Student responsibilities							
Students are required to attend classes, create a seminar paper and project, and take an oral exam. Seminar work and project should be conducted in consultation with the subject teacher.							
1.8. Monitoring of student work ¹							
Class attendance	0,5	Class participation		Seminar paper	1	Experimental work	
Written exam	2	Oral exam	0,5	Essay		Research	
Project	2	Continuous assessment		Report		Practical work	
Portfolio							
1.9. Assessment of learning outcomes in class and at the final exam (procedure and examples)							
Assessment and evaluation of students' work will be done on the basis of the results of the seminar paper, the project and the oral examination.							
1.10. Mandatory literature (at the time of submission of study programme proposal)							
C. Corazza, A. Višković, Svjetlo ili mrak: Koncept čovjek – energija, pogled iz Bruxellesa, Zagreb: IMO – Liderpress, 2010. G. Piani, A. Višković, B. Saftić, Protokol iz Kyota; Ostvaranje i budući razvoj, zakonodavstvo, strategije, tehnologije, Zagreb, Graphis, 2011.							
1.11. Optional/additional literature (at the time of submission of the study programme proposal)							
European Commission, "Attitudes of European citizens towards the environment", 2017.
